Analytical Abstracts

Analytical Abstracts is designed for workers with an interest in chemical analysis. It covers topics such as: new or modified methods of analysis; design, construction and use of analytical apparatus; reviews of analytical techniques and applications; comparison or evaluation of methods; and chemometric or computer applications in analysis. Detailed abstracts and bibliographic information are given for items selected from over 260 core journals. A subject index is included in each issue, and volume author and subject indexes are produced annually.

VOLUME 62 2000

Introduction to the Index

Subject Index

The alphabetically ordered subject index contains entries based on the most important subjects mentioned in the title and abstract. The chemical names used as index terms are chosen on the basis of the nomenclature recommended by the International Union of Pure and Applied Chemistry. Organic compounds are indexed at the parent compound followed by the substituent groups; esters and salts of organic acids are indexed under the names of their acid constituents.

As far as possible, dyes are indexed under the Colour Index names; the names given to enzymes are those recommended by The International Union of Biochemistry; drugs are indexed at their official B.P. or B.P.C. names or the Approved Names recommended by the British Pharmacopoeia Commission; and pesticides are indexed at the names recommended by the British Standards Institution.

Letter-by-letter alphabetization is used for the bold subject headings. Repetition of words or phrases that occur in preceding entries is avoided by the use of indentation.

E.g., Waste water, analysis of, by GC, 6H63 detmn. of cadmium in, by AAS, 2H61

Author Index

The names of all authors are listed alphabetically, and prefixes are treated as part of the surname. Where two or more authors have the same surname and initials, no attempt at resolution has been made. For instance, William Smith and Walter Smith will be included under the single entry "Smith, W."

The German ä, ö and ü and the Danish or Norwegian ø have been rendered as ae, oe, ue and oe, respectively.

Subject Index Guide

This guide directs the user to the preferred index term, as used in the Subject Index. Some headings have "see also" references to direct the user to more specific or closely related headings. "See" references indicate that the subject is indexed under another heading.
